Industry News

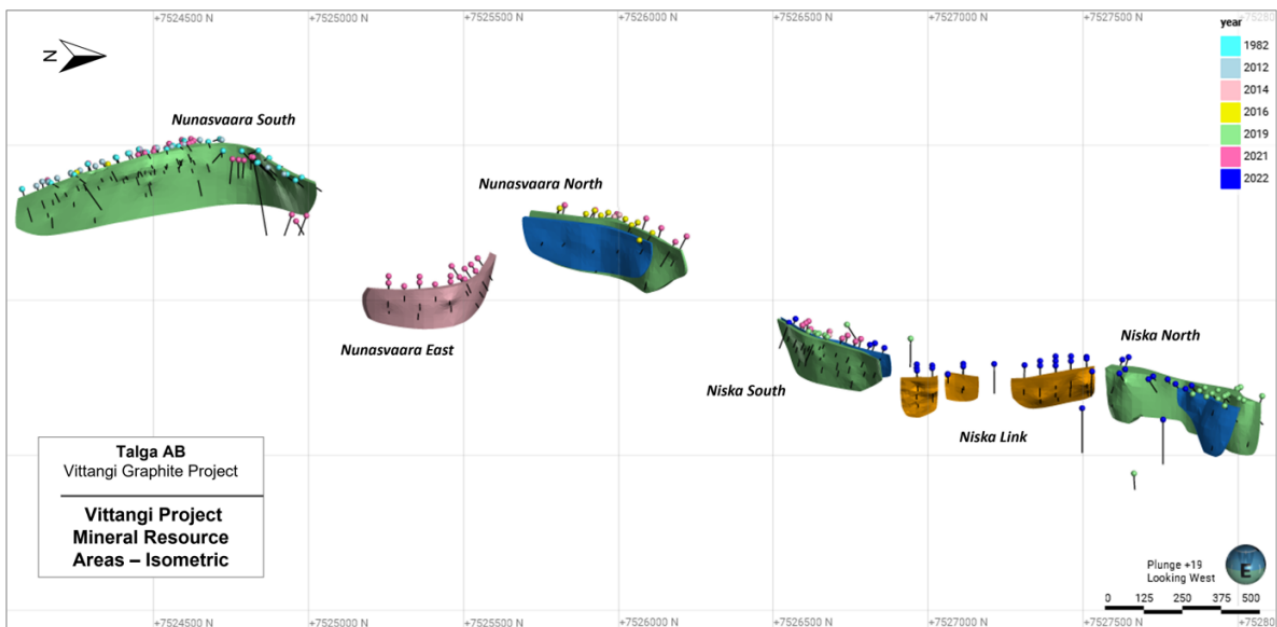

Bayrock Resources announced the commencement of diamond drilling at the high-grade Nickel-Cobalt-Copper Lainejaur project in northern Sweden. Drilling is testing an area of the Lainejaur project that has previously seen high-grade intersections, e.g. 9m @ 2.1% Ni, 0.7% Cu, 0.17% Co, 0.5g/t Au. The Lainejaur deposit was mined historically with a 2018 JORC-compliant estimate establishing an inferred mineral resource of 460 000t @ 2.2% Ni, 0.15% Cu, 0.15% Co, 0.7% Cu, 0.68g/t Pd, 0.2g/t Pt and 0.65g/t Au for the remaining mineralization. The deposit remains open down dip.

Industry News

Talga Group reported an increase in its Vittangi graphite resources by 23%. Following 2022 drilling around the Niska deposits, the updated estimate now includes a maiden resource for the Niska Link domain, resulting in a total project resource of 36.9 Mt @ 23.1% graphite at an 11% Cg cut-off grade. The estimate includes an indicated part of 27.8 Mt @ 23.8% Cg and an inferred part of 9 Mt @ 21.2% Cg with the deposit remaining open along strike and at depth.
