## Industry News

**Nordic Iron Ore** reported positive results from a recently concluded investigation into the occurrence of REEs at the Blötberget Iron deposit. Sampling of historic core and tailings material returned up to 6574ppm TREE in the footwall contact to the iron mineralization, 1167ppm in the main ore body, and an average grade of 1127ppm TREE from the tailings samples. The company plans further exploration to better assess the size and scale of the REE mineralized system.
