**Alicanto Minerals** reported the commencement of drilling activities at its Falun Copper-Gold project. Drilling will focus on high-priority targets around the historic Falun mine as well as along the highly prospective trend that runs between Falun and the Skyttgruvan-Naverberg target some 3.5km to the west.

# Industry News

**Gungnir Resources** reported assay results from its 2023 drilling program at the Lappvattnet nickel deposit. Testing the main zone continued to deliver high-grade assays, returning e.g. 6.10m @ 2.47% Ni, including 0.55m @ 7.36% Ni in drill hole LAP23-01. Drilling also intersected nickel mineralization in the footwall, returning e.g. 16.9m @ 0.56% Ni. Both, the main zone and the footwall mineralization are inferred to have a shallow plunge to the east into a sparsely drilled part of the property.

**Figure 1: LAPPVATTNET NICKEL DEPOSIT - VERTICAL LONG SECTION LOOKING NORTH**

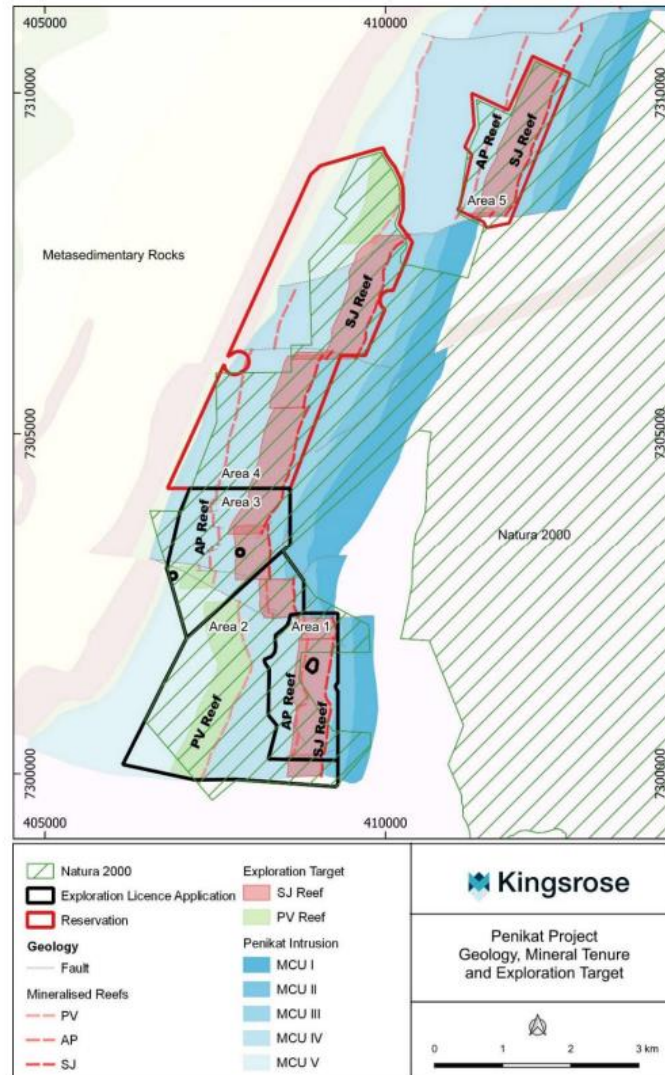

Both Main and Footwall Zones projected onto vertical section with select highlight drill intercepts (previously reported in red). The sub-parallel Footwall Zone is located about 25 to 75 metres in the structural footwall, or north of the Main Zone.

**Kingsrose Mining** announced the submission of a Natura 2000 Assessment for parts of its Penikat PGE project in northern Finland. Natura 2000 Assessment reports for the remainder of the project are expected to be submitted by the end of October. The submitted report indicates a minor impact of the proposed exploration activities and the company anticipates that exploration activities may commence in December 2024. Kingsrose aims to secure approval for 443 drill pads and associated access routes to assess and develop the high-grade PGE project.
